Introduction

Ever Increasing of world population in coming decades will lead to an important challenge of human community about sustainable development of procurement of sufficient food and to achieve a healthy community. Biological resources are as important as other natural resources like water, soil and weather. Paying attention to enormous diversity of animal, plant and microorganism species and to their application will result in national sustainable development. Because of the great importance of biological resources in life science and according to the endorsement of supreme leader of I.R. Iran, Iranian Biological Resources Center was established in 2008 under the authority of Academic Center for Education, Culture and Research (ACECR). Main goal of this center is improving of national researches for collection, preservation and studying of biological resources. Accordingly, in addition to supporting of other biological resource centers of the country as well as establishing of national network of biological resources, this center will attempt to be the pioneer center for collection, completion, organization, standardization and preservation of biological resources to achieve the development of life science and technology, enhancement of life quality and hygiene, improvement of food safety and preservation of natural resources and biodiversity.

Vision:

Attaining a pioneer center for “collection, identification, quality control, classification, registration, preservation, propagation and distribution of types of microorganisms and propagable cells like bacteria, fungi, viruses, types of plant and animal cells and genomic DNA and artificial nucleic acid products” to achieve the development of life science and technology, promotion of life quality and hygiene, preservation of natural resources and globalization of researches and collaborations.

Mission:

- 1- Identification, preparation, and collection of microorganisms, human and animal cells, plant cells and seeds from native and foreign resources.
- 2- Preparation of DNA bank from native and foreign resources.
- 3- Preparation, control and collection of DNA Vectors and their hosts for Biotechnological usage.
- 4- Supporting of BioBanks in other research centers and universities, as well as quality control, identification and preservation of their samples (Backing up) for future uses.
- 5- Registration of newly identified Microorganisms, plant & animal cells and DNA molecules as an act of Intellectual Property.
- 6- Development of relevant regulations, guidelines to be authorized by proper references for preservation of native biological resources.
- 7- Classification and registration of scientific information and data exists in research centers and universities of the country and development of data bank and network for microorganisms, cells, plant species and DNA molecules to provide research centers for universities and industrial centers.
- 8- Establishment of scientific collaboration with national, regional and international researchers, research centers and banks to improve the scientific situation of the center at nationally, regionally and internationally.

Human and Animal Cell Bank

● 7-10

Human and animal cell bank was established in spring 2009. Before establishing the laboratories, the structure and the design of standard banks were studied and visited about one year. During this study, we consulted with different researchers and organizations in this regard to understand the national priorities and needs. On the other hand, researchers in academic centers were surveyed to meet their requirements. Our consultants have been selected from enthusiastic academia and researchers and biological resource centers.

The missions of the department include:

- 1- Establishment of a national network for human and animal cells
- 2- Supporting of other Iranian cell banks and providing services such as quality control and characterization of cell cultures as well as establishment of a cell bank back up system
- 3- Training and scientific consultancy services for applicants
- 4- Preparation, identification, deposition, expansion, preservation and distribution of human and animal cell lines
- 5- Basic and applicable research related to our missions
- 6- National patent deposition services

Currently, the Human and Animal Cell bank is part of the Iranian Biological Resources network. It has been certified to the quality standard ISO 9001:2008 valid worldwide.

Laboratories :

Quarantine cell culture lab
Propagation cell culture lab
Immortalization cell culture lab
Training cell culture lab
Molecular and Biochemical lab
Real Time PCR lab
Sterility and mycoplasma quality control lab
Materials preparation and storage facility
Cell storage facility
Washing and sterilization facility
QA and documentation unit
Research and Development unit

Microorganisms Bank

● 11-18

The collection was established on 2008 under the authority of Academic Center for Education, Culture and Research (ACECR) and housed within the Iranian Biological Resource Center and it is one of the largest public collections of microorganisms in the country and a member of WFCC (World Federation of Culture Collections), currently containing strains of archaea, bacteria, molds and yeasts that can be handled in Biosafety level 1 or 2 facilities (Risk Group 1 or 2). The collection performs scientific research including taxonomic studies and screening of environmentally and industrially significant organisms.

Microorganisms bank is working to continuously improve the functions as a microbial resource center, to exploit new microbial resources, to describe novel microbial taxa and to develop the methods for investigating and handling extremophiles and microbial communities. Microorganisms bank has been acquired the certification of ISO 9001:2008 for its quality management system to maintain and improve the quality of its services.

Prokaryotes Laboratory

The species concept is based on a 'polyphasic' approach includes simultaneous description of diagnostic phenotypic features and genomic properties. Individual phenotypic characters used as diagnostic properties are insufficient to delineate a species, but together they provide sufficient descriptive information to allow the definition of a species. The more properties are included in the descriptions, the more robust and stable the resulting classification will be. Different properties have different resolving power; some are species specific, while others are valuable for discriminating genera, families and orders. Properties tested generally include morphological characters, information on motility, mode of energy generation and nutrient utilization, molecular oxygen requirement, growth range of pH and temperature, salt tolerance and requirement. Genotypic information includes 16S rRNA gene sequence analysis, which is a very valuable tool for rapidly placing any isolate within the current classification scheme, at least down to the family and genus level. For final identification of the species, DNA-DNA hybridization tests are the ultimate tool to decide whether two isolates

should be classified in the same species.

At the laboratory of Prokaryotic identification, various methods mentioned above are being applied to fulfill the main needed requirements to fully identification of an unknown microorganism.

Chemotaxonomy Laboratory

Biochemistry of microorganisms have revealed that cell-component analysis can be effectively applied to bacterial systematic, providing the basis of chemotaxonomy. Morphology of microorganisms does not provide quantitative information at the same level as chemotaxonomy. In addition molecular-genetic data make it clear that morphological resemblance does not always imply phylogenetic relationship. Analysis of cell components is coming to be essential tool not only for microbial classification but also for identification. Chemical components that satisfy the following conditions have significant meaning in bacterial systematic:

- 1- They should be distributed universally among the microorganisms to be studied
- 2- The data are homologous among the strains within a taxon, while significant differences exist between the taxa to be differentiated
- 3- Analysis is easily carried out for a large number of samples

Characterization of the cell wall compounds (amino acids and carbohydrates) and cell membrane compounds (polar lipids, isoprenoid quinones in yeast and Gram-negative bacteria) is being conducted at the chemotaxonomy lab. IBRC uses the modern equipments and facilities at the Microorganisms Bank which enhances the abilities of the high qualified young scientists working on the projects.

Mycology Laboratory

Molds unit

Molds unit performs standard methodologies of Screening, Isolation, Purification and Identification to describe fungal isolates. Our focus is on Dikarya together with zygomycetes.

In a general procedure of identification, the purity is checked using

single spore and hyphal tip isolation techniques at the quality control. Detailed morphology and morphometry information are gathered by macroscopic and microscopic studies on various standard media. Phylogenetic analysis of internal transcribed spacer fragment (ITS) reveals important information of the phylogenetic positioning of the given isolate. Also sequence analysis of SSU, LSU, Tub, Act and EF-1 fragments (Multi-gene phylogeny) are used to describe the fungal isolate at the species level, if possible. In certain cases that the isolate seems to be undescribed and novel taxa or due to the absence of reference sequences the higher and as accurately as possible taxon affinities will be reported. However each part of the above mentioned process may be offered or not by the specimen senders and senders are free to offer additional studies, if possible.

The full identification procedure from purification at the quality control division to the multi-gene phylogeny analysis and then taxonomic report delivery doesn't extend rather than three months. But in certain cases it may need more time due to the specific incubations and growth rates or sequencing errors. For urgent cases, contact us before sending specimens. Any information from the geography of isolation, sampling, media and incubations may help accelerating the identification process.

Yeasts unit

Yeasts unit is responsible for collection of yeast cultures with medical and industrial importance and offers services to the national and international scientific community and to other private Institutions. The main objectives of our laboratory are the acquisition, classification, preservation and distribution of cultures of yeast and yeast-like organisms.

We provide a full service for identifying yeasts using Polyphasic approach including morphological analysis, standard physiological profiling, chemotaxonomic analysis and DNA sequencing.

Physiological profiling provides a full report on the characteristics of the strain identified and takes 4-12 weeks to complete from the time of inoculation of the test media. The Physiological profiling methods used are those described in "The Yeasts. A Taxonomic Study", 4th edition

(ed. Kurtzman, C.P., Fell J.W., 1998) and also "Yeasts: Characteristics and Identification" Third Edition, (ed. Barnett J.A., Payne R.W., Yarrow D., 2000). DNA sequence analysis (of the D1/D2 region of the 26S rDNA and/or internal transcribed spacer fragment (ITS) region) is recommended for rapid identification to species level and usually takes from 4 to 8 weeks from receipt of a culture.

The cultures sent for identification should be pure and sent to mycology laboratory securely packed, preferably on agar slopes. The mycology laboratory can attempt isolation of individual strains from mixtures although this will involve an extra charge. Any information already known about the properties of the culture, especially the environment from which it was isolated, should be sent with the culture.

Cultures for identification are dealt with in rotation with those already received. Identification data are kept confidentially and cultures submitted for identification do not enter the open collection without permission from the depositor.

Preservation Laboratory

The establishment and maintenance of Biological Resource Centers (BRCs) requires precise attention to implementation of reliable preservation technologies and appropriate quality control to ensure that recovered cultures and other biological materials perform in the same way as the originally isolated cultures or materials. The preservation lab is the main core of IBRC. On the preservation field, IBRC is fully equipped with all needed facilities. Cryopreservation and freeze drying are two main methods which are being used for long-term preservation of the microorganisms.

Cryopreservation

Cryopreservation has been developed and applied as one of the most secure methods to preserve the microorganisms. By this method cultures are being stored at the mechanical ultra-low freezers and liquid nitrogen tanks at extremely low temperatures. Now, IBRC has required working space for more than 2000 strains of the microorganisms.

Freeze Drying

Freeze-drying is a secure back-up method which is applied at the IBRC. In addition, shipping conditions for lyophilized ampoules are more facile than cryovials, because cryovials must be transferred in freezing temperature, while the lyophilized ampoules can be stored at ambient temperature during transport.

Quality Control

Every deposited strain which is identified by the IBRC must pass the quality control assessments to be preserved via the mentioned methods. This quality control includes macroscopic and microscopic properties, biochemical assays and molecular analysis. Furthermore, periodic quality controls for each strain are being done and three fundamental properties of stored strains must be examined:

1. Purity (Free of any contaminant organisms)
2. Authenticity (Correct identity of each strain)
3. Viability (Survival).

Banking System

This banking scheme can be used to ensure that cultures are subjected to minimum in vitro passages before distribution to researchers and it can also act as the basis for a process map that can be used to establish a quality assurance system with appropriate traceability for bank preparation and quality control. Our master, seed and work lot system will prevent unintentional mutations during sub culturing of strains. By this system, each strain would be cultured only two times since the date of deposition. It means you will receive the same strain with the certain characteristics and traits that depositor of the strains has been reported.

Bioinformatics Unit

Initiated in 2012, the Bioinformatics unit aims to advance microbial systematics and phylogenetic systematics in Iranian Biological Resource Center (IBRC).

Research in the Bioinformatics unit focuses on the application of microbial phylogenetics. The importance of precise reconstruction of evolutionary history extends far beyond the limitations of evolutionary

microbiology. Phylogenetics is now a fundamental component of research in molecular biology, genomics, medicine, ecology, agriculture, epidemiology, and even forensics.

The Bioinformatics unit evaluates, creates, and applies phylogenetic and phylogenomic methods to some of today's most pressing questions in microbiology. Our work concerns the development of new experimental and computational tools and data bases for discovery through sequencing and other high-throughput genomics, epigenomics, and informatics.

This Group is also working on secondary structure of ribosomal RNA, metabolic network analysis and Average Nucleotide Identity (ANI).

General services includes: Quality assessment of 16S rRNA sequence based on secondary structure stability and conserved regions in different taxonomic levels, preparation of sequence sets together with related data for submission to GenBank and phylogenetic analysis by MEGA5, Phylip or ARB software.

Microalgae Laboratory

Algae are very diverse organisms which their size has a wide range from 1 micron to 50 meters as Kelp aquatic forests. Their vegetative morphology or thallus is in the following categories: Motile and non-motile unicellular, motile or non-motile colonies, pseudo-filamentous, filamentous with true or false branches, pseudo-paranchimatos and paranchimatos, coenocytic or siphonous. They have distributed widely in the nature and have very important ecological effects.

Algae are not a monophylic group of organisms with homogeneity taxonomic structure but they are polyphyletic group. The most important primary characteristics for identification are morphology, photosynthetic pigments, food reservoir, cell cover and other cellular organization.

Recently the molecular tools are making a revolution in algal taxonomy however the classic taxonomy is still useful and applies for systematics.

There is no strict consensus about the number of algal divisions and 8 to 11 has been mentioned in different references:

Green algae, Cyanobacteria (Blue-Green algae), Diatoms, Euglenoids, Chrysophytes; Yellow-Green algae, Red algae, Brown algae, Dinoflagellates, Cryptomonads and Haptophytes.

Plant Bank

● 19-22

Plant Bank is one of the four banks of the Iranian Biological Resource Center. Collection, conservation and management of the plant materials in Iran are the goals of the bank. Creating information networks and information services for researchers and related institutes will be the next step.

The main activities of this bank are:

A. Plant tissue culture

Plant tissue culture is the science of growing plant cells, tissues or organs isolated from the mother plant, on artificial media. Many plant explants such as garlic, potato and anthurium are stored in this laboratory.

B. Plant Cryopreservation

Cryopreservation is a process where cells or whole tissues are preserved by cooling to low sub-zero temperatures, such as -196°C . Orthodox seeds of different species are cryopreserved in our laboratory. In near future we will maintain vegetative germplasm and recalcitrant seeds in this laboratory.

C. Seed storage bank

A seedbank stores seeds as a source for planting in case seed reserves elsewhere are destroyed. Seeds are dried to a moisture content of less than 5% and then stored at 4 and -20°C . We conserved almost 8600 seed samples collected from different regions of Iran or received from abroad countries.

D. Herbarium

Herbarium is a collection of dried and identified plant specimens which for long-time periods will be preserved in a rational order. Surely identification is basic to any scientific activity. For name determining, we amass herbarium vouchers, besides each plant materials. During

the 4 last years, we have collected and identified about 5000 specimens nearly all over our country. As our expeditions will be continuing, our collection will be increasing.

E. Essential oils and plant extract bank

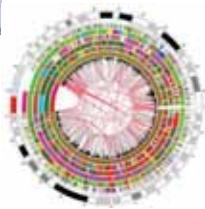

Extracts are collection of crude mixtures extracted from different parts of plants sampling the flora of Iran. In our database we conserve 850 extracts and plant materials (stem, leave, flower and root) in as 4 °C. The phytochemical laboratories are capable of generating plant extracts from fresh or dried plant material and possess analytical methodologies including TLC and HPLC.

F. Cytogenetics

Cytogenetics is a hybrid science that combines cytology and genetics. The science includes techniques to obtain precise information on chromosome numbers, and chromosome structures. Nowadays our lab with having advanced equipments can easily study the numerical and structural changes of chromosomes in higher plants.

Molecular Bank

● 23-26

Molecular bank is one of the four banks of the Iranian Biological Resource Center. The main mission of the bank is to apply advanced technologies to identify, assess and store genetic materials. It also provides services for molecular analysis and genotyping of plants, cell lines and microorganisms. In this regard, scientific and technical services, manufacturing of various products related to molecular biology in order to accelerate and reduce the cost of services and holding of diverse training courses are the bank's priorities which can help to develop and enhance the technical capabilities of graduates and academic researchers.

Laboratories

- Core facility

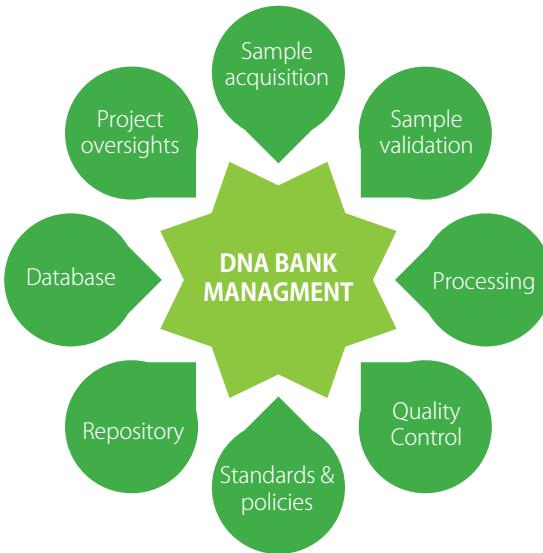

DNA Bank

Nowadays DNA banks are notified as strategic part of modern genbanks. Because of their important roles in improving the genbank management , via providing the fundation for phylogenetic relationship studies and identifying the gaps between exist collections as well as most variable genotypes or organisms. In this way, DNA bank of IBRC has been established since 2012. The goals of IBRC DNA bank are:

1-Long-term storage of DNA material with high quality from cell lines and tissues of plant, human and animal as well as Microorganisms, native and recombinant vectors.

2- Accessibility of the well documented DNA materials for national and international institutes to employ in molecular biology researches.

3- Complete on-line documentation of each sample with a unique barcode, including Information about the DNA samples, the vouchers and the collections.

Also, the IBRC's vector bank has been established in order to collect, construct and preserve of biologically important vectors and host in the standard conditions to provide the most reliable vectors and host for the researchers.

Researches

At the present, research preferences of the molecular bank are the genome sequencing , quantitative microbial community analysis of Human, food and environment analysis using pyrotagged sequencing technique and molecular identification and phylogenetical analysis of plants, animals and microorganisms.

Two Iranian bacteria complete genome sequencing and registration Regarding the main goals of IBRC to use the cutting edge knowledge for analysis, identification, preservation and application of Iranian valuable biological and genetical resources, the molecular bank proudly introduce the name of IBRC as the first center in Iran for sequencing, annotation, advance bioinformatic analysis, and registration of two native halophilic bacterial complete genome named Nesterenkonia sp. F and Oceanimonas sp. GK1.

IBRC Services

● 27-34

Specialty Service Affairs

IBRC has a Center for Biotechnology Services which has been called the Specialty Service, bringing biomaterials and biological services providing researchers the tools they need to undertake world-class research. The aim of the Specialty Services is to provide internationally competitive core facilities open to all researchers within the Colleges, industries and medical centers. In fulfillment of this objective, we intend to facilitate services especially for Identification, preparation, and collection of microorganisms, human and animal cells, Molecular components such as DNA, Vector and host Cells, plant cells and seeds in cooperation with all IBRC bio-banks. Furthermore, our collaboration with all researchers and world bio-banks to identify, preserve and deposit new biological samples for future research. In order to provide more information, please do not hesitate to contact us through the email or call-center indicated below:

service@ibrc.ir

Human & Animal Cell Bank Services

NO.	Identification and Cell Preparation
1	Mycoplasma testing: <ul style="list-style-type: none">• Classical broth-agar culture isolation• PCR analysis• DNA staining
2	Sterility testing
3	PCR identify verification of cell lines: <ul style="list-style-type: none">• Species identification• Inter species cross-contamination
4	Authentication of human cell lines
5	Cell line validation testing certification
6	Characterization of new cell lines
7	Providing the growth curve of cell lines on request
8	Providing the mammalian fibroblast cell lines
9	Distribution of cell lines on request
10	DNA and RNA from cell lines
11	DNA and RNA isolation from human and animal biological samples
12	Real time PCR services for gene expression analysis
13	Safe deposits
14	Cell culture supernatants preparation
15	Assay ready cells
16	MTT cytotoxicity assay
17	Consultation services <ul style="list-style-type: none">• Establishment of a cell culture room• Establishment of a cell bank• Establishment of required techniques in cell banking

Microorganisms Bank Services

NO.	(Full phenotypic characterization of Molds (Morphology, Morphometry, Physiology
1	Prokaryotic strain purification
2	Partial identification of Bacteria
3	Full phenotypic characterization of Bacteria
4	Full phenotypic characterization of Actinomycetes
5	Full phenotypic characterization of Archaea and extremophiles
6	General identification of bacteria using API minikits

NO. Full Phenotype-based Characterization of Yeasts (Physiology, Biochemistry, Morphology)

1	Purification of Mold and Yeast strains
2	Preliminary Phenotype-based characterization of Molds and Yeasts
3	Full phenotypic characterization of molds (Morphology, Morphometry, physiology)
4	Full Phenotype-based Characterization of Yeasts (Physiology, Biochemistry, Morphology)

NO.	General Services
1	Preparation of freeze-dried or Suspension of spores

NO.	Preservation Services
1	Preparation of Freeze-Dried Ampoule from Received Non-extremophilic or Rapidly Growing Bacteria
2	Preparation of Freeze-Dried Ampoule from Received Extremophilic and Fastidious Bacteria
3	Preparation of Freeze-Dried Ampoule from Received Archaea Strain
4	Preparation of Freeze-Dried Ampoule from Received Fungal Strain
5	Freeze-Drying of Microbial Biomass
6	Offering of Purchased Bacterial Strain as Freeze-Dried Ampoule
7	Offering of Purchased Archaea Strain as Freeze-Dried Ampoule
8	Offering of Purchased Fungal Strain as Freeze-Dried Ampoule
9	Offering of Purchased Bacterial Strain as Actively Growing Culture
10	Offering of Purchased Archaea Strain as Actively Growing Culture
11	Offering of Purchased Fungal Strain as Actively Growing Culture
12	Reactivation of Freeze-Dried Ampoule and Preparation of its Actively Growing Culture

NO.	Genotype-Identification of Microorganisms
1	Complete phylogenetic study by rDNA sequence analysis with MEGA5
2	Partial 16S rRNA sequence analysis
3	Large volume bacterial genomic DNA extraction (25ml, 40-50ng/ μ l)
4	DNA base composition (G + C Content) by HPLC
5	Identification of fungi (Molds and Yeasts) based on the sequence analysis of one of the nrRNA gene fragments including: ITS, D1-D2, SSU and assessment of the similarity in databases
6	Identification of Fungal isolates using MLST approach on the basis of sequence analysis of two or more fragments of nrRNA gene (SSU,ITS,D1-D2) and protein coding genes including Actin, EF-1, and Tubulin
7	Phylogenetic analysis of fungal isolates using sequence analysis of a given fragment (D1-D2 and/or ITS)
8	Bioinformatic and Phylogenetic analysis using MLST (Using rRNA fragments and protein coding genes: SSU, LSU, ITS, Act, Tub, EF-1)
9	rDNA Sequence Evolution (Chimera check, secondary Structure and conserved region assessment)
10	Complete phylogenetic study by rDNA sequence analysis with ARB

NO.	Chemotaxonomy of Microorganisms
1	Biomass production for analysis
2	Peptidoglycan typing
3	Cell Wall preparation for peptidoglycan typing
4	Diaminopimelic acid analysis
5	Analysis of whole sugar content
6	Respiratory quinones analysis in Gram negative bacteria and yeasts
7	Polar Lipid Analysis

Molecular Services

NO.	Identification and Cell Preparation
1	DNA Extraction from various source samples
2	Ribotyping of bacteria and archaea based on 16s rRNA gene (full length)
3	Ribotyping of yeasts and fungi
4	Molecular phylogenetic analysis of plants using ITS and ETS regions and chloroplast's genes
5	Molecular Fingerprinting of plants and animals using micro satellite (SSR) markers.
6	DNA barcoding of animals based on COI encoding gene sequence analysis.
7	Cloning of eukaryotic and prokaryotic functional genes into expressional vectors.

Plant Services

NO.	Plant Tissue Culture Services
1	Optimization of plant micro propagation protocol (Plants with a history of research work)
2	Optimization of plant micro propagation protocol (Plants without a history of research work)
3	Micro propagation of Woody plants (Multiplying the prepared samples at least 100 number)
4	Micro propagation of Herbaceous plants (Multiplying the prepared samples at least 100 number)
5	Optimization of plant cryopreservation protocol (for a species)
6	Conservation of prepared samples in cryopreservation
7	Preparation of plant tissue culture media

NO.	Plant Cytogenetics services
1	Meiosis and meiosis abnormalities studies
2	Mitosis studies and karyotype preparation
3	Constitutive Heterochromatic Banding

NO.	Herbarium Services
1	Floristic studies on protected and unprotected areas (Collecting; Identifying; and preparing of herbarium specimens, geographical distribution maps)
2	Floristic studies on protected and unprotected areas (Seeds and plant specimens collecting; Identifying; and preparing of herbarium specimens, digital photos and geographical distribution maps)
3	Plant identification (Identifying of Dicots; Poaceae and Orchidaceae family plants)
4	Plant identification (Identifying of Monocots plants)

NO.	Phytochemical Services
1	Evaluation of the Antioxidant Activity (DPPH)
2	Evaluation of the Antioxidant Activity (POD)
3	Evaluation of the Antioxidant Activity (CAT)
4	Evaluation of the Antioxidant Activity (SOD)
5	Total phenol analysis
6	Phytochemical analysis with RP-HPLC
7	Extraction of essential oil
8	Plant extraction
9	Preparation of essential oil (100µl)
10	Preparation of extract (5ml)
11	SDS-PAGE Electrophoresis
12	PAGE Electrophoresis
13	Zymogram
14	Total protein analysis

31	IBRC-M 10226	<i>Salinicoccus kunmingensis</i>
32	IBRC-M 10227	<i>Salinicoccus hispanicus</i>
33	IBRC-M 10228	<i>Salinicoccus alkaliphilus</i>
34	IBRC-M 10248	<i>Haloferax volcanii</i>
35	IBRC-M 10249	<i>Halogeometricum borinquense</i>
36	IBRC-M 10250	<i>Halorubrum saccharovorum</i>
37	IBRC-M 10251	<i>Haloterrigena turkmenica</i>
38	IBRC-M 10257	<i>Natrinema pellirubrum</i>
39	IBRC-M 10336	<i>Haloarcula vallismortis</i>
40	IBRC-M 10337	<i>Haloferax mediterranei</i>
41	IBRC-M 10338	<i>Halorubrum lacusprofundi</i>
42	IBRC-M 10339	<i>Halovivax ruber</i>
43	IBRC-M 10340	<i>Salinibacter ruber</i>
44	IBRC-M 10341	<i>Natrialba asiatica</i>
45	IBRC-M 10378	<i>Lechevalieria fradiae</i>
46	IBRC-M 10423	<i>Salinibacter luteus</i>
47	IBRC-M 10429	<i>Alcanivorax dieselolei</i>
48	IBRC-M 10432	<i>Chromohalobacter sp.</i>
49	IBRC-M 10433	<i>Halomonas elongata</i>
50	IBRC-M 10434	<i>Halomonas sinaiensis</i>
51	IBRC-M 10435	<i>Halomonas sp.</i>
52	IBRC-M 10436	<i>Alteribacillus persepolensis</i>
53	IBRC-M 10439	<i>Alkalibacillus flavidus</i>
54	IBRC-M 10440	<i>Lentibacillus persicus</i>
55	IBRC-M 10443	<i>Salinicoccus qingdaonensis</i>
56	IBRC-M 10446	<i>Bacillus iranensis</i>
57	IBRC-M 10559	<i>Lechevalieria fradiae</i>

58	IBRC-M 10560	<i>Ornithinibacillus bavariensis</i>
59	IBRC-M 10561	<i>Microbacterium testaceum</i>
60	IBRC-M 10562	<i>Piscibacillus salipiscarius</i>
61	IBRC-M 10563	<i>Virgibacillus halodenitrificans</i>
62	IBRC-M 10564	<i>Halomonas denitrificans</i>
63	IBRC-M 10565	<i>Oceanobacillus kapialis</i>
64	IBRC-M 10567	<i>Oceanobacillus profundus</i>
65	IBRC-M 10589	<i>Bacillus clausii</i>
66	IBRC-M 10590	<i>Bacillus niabensis</i>
67	IBRC-M 10591	<i>Marinilactibacillus piezotolerans</i>
68	IBRC-M 10592	<i>Marinobacter hydrocarbonoclasticus</i>
69	IBRC-M 10593	<i>Pseudomonas pertucinogena</i>
70	IBRC-M 10594	<i>Marinilactibacillus psychrotolerans</i>
71	IBRC-M 10595	<i>Aquisalibacillus elongatus</i>
72	IBRC-M 10596	<i>Bacillus alkalitelluris</i>
73	IBRC-M 10597	<i>Rhodovibrio salinarum</i>
74	IBRC-M 10598	<i>Idiomarina zobellii</i>
75	IBRC-M 10614	<i>Alteribacillus bidgolensis</i>
76	IBRC-M 10625	<i>Bacillus foraminis</i>
77	IBRC-M 10626	<i>Ornithinibacillus contaminans</i>
78	IBRC-M 10627	<i>Salinicoccus qingdaonensis</i>
79	IBRC-M 10629	<i>Saliterribacillus persicus</i>
80	IBRC-M 10631	<i>Streptococcus agalactiae</i>
81	IBRC-M 10633	<i>Listeria ivanoviisubsp. ivanovii</i>
82	IBRC-M 10635	<i>Staphylococcus saprophyticus</i>
83	IBRC-M 10636	<i>Staphylococcus saprophyticus</i>
84	IBRC-M 10637	<i>Streptococcus gallolyticus subsp.gallolyticus</i>
85	IBRC-M 10638	<i>Acetobacter aceti</i>
86	IBRC-M 10639	<i>Klebsiella oxytoca</i>

87	IBRC-M 10640	<i>Mycobacterium fortuitum</i> subsp. <i>fortuitu</i>
88	IBRC-M 10644	<i>Xanthomonas campestris</i>
89	IBRC-M 10645	<i>Achromobacter</i> sp
90	IBRC-M 10650	<i>Alcaligenes faecalissubsp. faecalis</i>
91	IBRC-M 10651	<i>Staphylococcus simulans</i>
92	IBRC-M 10652	<i>Enterobacter cloacaesubsp. cloacae</i>
93	IBRC-M 10653	<i>Bacillus atrophaeus</i>
94	IBRC-M 10654	<i>Acinetobacter baumannii</i>
95	IBRC-M 10655	<i>Alloactinosynnema album</i>
96	IBRC-M 10657	<i>Virgibacillus koreensis</i>
97	IBRC-M 10658	<i>Pasteurella aerogenes</i>
98	IBRC-M 10659	<i>Nocardia ignorata</i>
99	IBRC-M 10660	<i>Micromonospora chalcea</i>
100	IBRC-M 10661	<i>Nocardia lijiangensis</i>
101	IBRC-M 10663	<i>Bacillus licheniformis</i>
102	IBRC-M 10664	<i>Brevibacillus laterosporus</i>
103	IBRC-M 10665	<i>Achromobacter</i>
104	IBRC-M 10666	<i>Lactobacillus sakei</i> subsp. <i>sakei</i>
105	IBRC-M 10667	<i>Pseudomonas fluorescens</i>
106	IBRC-M 10676	<i>Moraxella osloensis</i>
107	IBRC-M 10678	<i>Streptococcus sanguinis</i>
108	IBRC-M 10679	<i>Staphylococcus warneri</i>
109	IBRC-M 10680	<i>Streptococcus vestibularis</i>
110	IBRC-M 10682	<i>Streptococcus mutans</i>
111	IBRC-M 10697	<i>Bacillus circulans</i>
112	IBRC-M 10699	<i>Rhodococcus equi</i>
113	IBRC-M 10700	<i>Citrobacter koseri</i>
114	IBRC-M 10701	<i>Rhizobium radiobacter</i>
115	IBRC-M 10630	<i>Streptococcus mitis</i>

116	IBRC-M 10656	<i>Natronococcus roseus</i>
117	IBRC-M 10668	<i>Salmonella enterica</i> subsp. <i>Enterica</i> (<i>Salmonella paratyphi-A</i>)
118	IBRC-M 10669	<i>Salmonella enterica</i> subsp. <i>Enterica</i> (<i>Salmonella choleraesuis</i> subsp. <i>Choleraesuis</i>)
119	IBRC-M 10670	<i>Yersinia enterocolitica</i> subsp. <i>enterocolitica</i>
120	IBRC-M 10671	<i>Listeria monocytogenes</i>
121	IBRC-M 10672	<i>Shigella sonnei</i>
122	IBRC-M 10674	<i>Proteus mirabilis</i>
123	IBRC-M 10675	<i>Brevibacillus agri</i>
124	IBRC-M 10677	<i>Streptococcus gallolyticus</i>
125	IBRC-M 10683	<i>Ornithinibacillus halophilus</i>
126	IBRC-M 10684	<i>Corynebacterium pseudodiphtheriticum</i>
127	IBRC-M 10686	<i>Acinetobacter lwoffii</i>
128	IBRC-M 10687	<i>Enterobacter aerogenes</i>
129	IBRC-M 10688	<i>Ornithinibacillus californiensis</i>
130	IBRC-M 10690	<i>Staphylococcus aureus</i> subsp. <i>aureus</i>
131	IBRC-M 10691	<i>Micrococcus luteus</i>
132	IBRC-M 10692	<i>Lactococcus lactis</i> subsp. <i>lactis</i>
133	IBRC-M 10693	<i>Stenotrophomonas maltophilia</i>
134	IBRC-M 1069	<i>Staphylococcus xylosus</i>
135	IBRC-M 10696	<i>Bacillus subtilis</i> subsp. <i>subtilis</i>
136	IBRC-M 10698	<i>Escherichia coli</i>
137	IBR-M 10702	<i>Pseudomonas syringae</i> pv. <i>syringae</i>
138	IBRC-M 10715	<i>Halobacterium salinarum</i>
139	IBRC- 30002	<i>Pseudozyma</i> sp.
140	IBRC-M 30003	<i>Pseudozyma</i> sp.
141	IBRC-M 30004	<i>Saccharomyces cerevisiae</i>
142	IBRC-M 30005	<i>Candida parapsilosis</i>
143	IBRC-M 30069	<i>Saccharomyces cerevisiae</i>

144	IBRC-M 30070	<i>Candida albicans</i>
145	IBRC-M 30071	<i>Candida guilliermondii Pichia guilliermondii</i>
146	IBRC-M 30072	<i>Candida utilis Pichia jadinii</i>
147	IBRC-M 10673	<i>Burkholderia cepacia (Pseudomonas cepacia)</i>
148	IBRC-M 10681	<i>Streptococcus parasanguinis</i>
149	IBRC-M 10685	<i>Moraxella subgen. branhamella catarrhalis</i>
150	IBRC-M 10694	<i>Staphylococcus epidermidis</i>
151	IBRC-M 10705	<i>Serratia marcescens subsp. marcescens</i>
152	IBRC-M 10706	<i>Vibrio parahaemolyticus</i>
153	IBRC-M 10707	<i>Salmonella enterica subsp. enterica</i>
154	IBRC-M 10708	<i>Escherichia coli</i>
155	IBRC-M 10709	<i>Pseudomonas aeruginosa</i>
156	IBRC-M 10739	<i>Leuconostoc mesenteroides subsp. mesenteroides</i>
157	IBRC-M 10740	<i>Enterococcus faecalis</i>
158	IBRC-M 10710	<i>Bordetella parapertussis</i>
159	IBRC-M 10723	<i>Mycobacterium gordonaiae</i>
160	IBRC-M 10724	<i>Mycobacterium avium subsp. avium</i>
161	IBRC-M 10727	<i>Vibrio alginolyticus</i>
162	IBRC-M 10728	<i>Neisseria subflava</i>
163	IBRC-M 10730	<i>Lactobacillus delbrueckii subsp. bulgaricus</i>
164	IBRC-M 10733	<i>Alteromonas macleodii</i>
165	IBRC-M 10734	<i>Halomonas anticariensis</i>
166	IBRC-M 10735	<i>Virgibacillus byunsanensis</i>
167	IBRC-M 10744	<i>Achromobacter marplatensis</i>
168	IBRC-M 10566	<i>Halomonas ventosae</i>
169	IBRCM 10689	<i>Bacillus herbersteinensis</i>
170	IBRC-M 10712	<i>Enterococcus casseliflavus</i>
171	IBRC-M 10716	<i>Morganella morganii subsp. morganii</i>
172	IBRC-M 10719	<i>Klebsiella pneumoniae subsp. pneumoniae</i>
173	IBRC-M 10721	<i>Neisseria sicca</i>

174	IBRC-M 10737	<i>Paenibacillus macuariensis subsp. macuariensis</i>
175	IBRC-M 10745	<i>Kytococcus sedentarius</i>
176	IBRC-M 10753	<i>Enterococcus durans</i>
177	IBRC-M 10018	<i>Limimonas halophila</i>
178	IBRC-M 10418	<i>Halopenitus malekzadehii</i>
179	IBRC-M 10704	<i>Salmonella enterica subsp. enterica</i>
180	IBRC-M 10711	<i>Lactobacillus casei</i>
181	IBRC-M 10718	<i>Edwardsiella tarda</i>
182	IBRC-M 10732	<i>Bacillus pumilus</i>
183	IBRC-M 10736	<i>Bacillus halodurans</i>
184	IBRC-M 10743	<i>Thalassobacillus cyri</i>
185	IBRC-M 10746	<i>Shigella flexneri</i>
186	IBRC-M 10749	<i>Erwinia amylovora</i>
187	IBRC-M 10750	<i>Erwinia amylovora</i>
188	IBRC-M 10751	<i>Erwinia amylovora</i>
189	IBRC-M 10752	<i>Pseudomonas fluorescens</i>
190	IBRC-M 30029	<i>Aspergillus section Flavi sp.</i>
191	IBRC-M 30044	<i>Penicillium sp.</i>
192	IBRC-M 30028	<i>Paecilomyces sp.</i>
193	IBRC-M 30041	<i>Aspergillus section Terrei sp.</i>
194	IBRC-M 30043	<i>Aspergillus section Terrei sp.</i>
195	IBRC-M 30060	<i>Talaromyces stipitatus</i>
196	IBRC-M 30022	<i>Aspergillus persii</i>
197	IBRC-M 30048	<i>Aspergillus fumigatus</i>
198	IBRC-M 30040	<i>Aspergillus fumigatus</i>
199	IBRC-M 30034	<i>Aspergillus section Terrei sp.</i>
200	IBRC-M 30035	<i>Aspergillus section Terrei sp.</i>
201	IBRC-M 30039	<i>Penicillium sp.</i>
202	IBRC-M 30046	<i>Emericellopsis sp.</i>
203	IBRC-M 30053	<i>Aspergillus sp.</i>

204	IBRC-M 30061	<i>Cladosporium</i> sp.
205	IBRC-M 30036	<i>Aspergillus</i> sp.

Native Microorganisms of Iran

No.	Strain number	Name
1	IBRC-M 10013	<i>Haloarchaeobius iranensis</i>
2	IBRC-M 10015	<i>Halovenus aranensis</i>
3	IBRC-M 10018	<i>Limimonas halophila</i>
4	IBRC-M 10036	<i>Salinibacter iranicus</i>
5	IBRC-M 10041	<i>Halopenitus persicus</i>
6	IBRC-M 10078	<i>Bacillus salsus</i>
7	IBRC-M 10115	<i>Bacillus persicus</i>
8	IBRC-M 10198	<i>Salinicoccus iranensis</i>
9	IBRC-M 10218	<i>Salinivibrio proteolyticus</i>
10	IBRC-M 10220	<i>Piscibacillus halophilus</i>
11	IBRC-M 10221	<i>Halobacillus karajensis</i>
12	IBRC-M 10418	<i>Halopenitus malekzadehii</i>
13	IBRC-M 10423	<i>Salinibacter luteus</i>
14	IBRC-M 10436	<i>Alteribacillus persepolensis</i>
15	IBRC-M 10440	<i>Lentibacillus persicus</i>
16	IBRC-M 10446	<i>Bacillus iranensis</i>
17	IBRC-M 10614	<i>Alteribacillus bidgolensis</i>
18	IBRC-M 10629	<i>Saliterribacillus persicus</i>
19	IBRC-M 10683	<i>Ornithinibacillus halophilus</i>
20	IBRC-M 10743	<i>Thalassobacillus cyri</i>
21	IBRC-M 10212	<i>Staphylococcus pasteurii</i>
22	IBRC-M 10214	<i>Halomonas elongata</i>
23	IBRC-M 10215	<i>Halobacillus sp.</i>
24	IBRC-M 10216	<i>Halomonas elongata</i>
25	IBRC-M 10217	<i>Halobacillus halophilus</i>

Applicable Microorganisms in Biotechnology

Microorganisms with decolorization capabilities

No.	Strain number	Name
1	IBRC-M 10199	<i>Halomonas</i> sp.
2	IBRC-M 10200	<i>Halomonas</i> sp.

Microorganisms able to reduce heavy metals concentrations

No.	Strain number	Name
1	IBRC-M 10198	<i>Salinicoccus iranensis</i>
2	IBRC-M 10214	<i>Halomonas elongata</i>
3	IBRC-M 10224	<i>Nesterenkonia</i> sp.

Microorganisms with biodegradation capabilities

No.	Strain number	Name
1	IBRC-M 10429	<i>Alcanivorax dieselolei</i>
2	IBRC-M 10432	<i>Chromohalobacter</i> sp.
3	IBRC-M 10434	<i>Halomonas sinaiensis</i>
4	IBRC-M 10435	<i>Halomonas</i> sp.

Proteolytic Microorganisms

No.	Strain number	Name
1	IBRC-M 10095	<i>Bacillus</i> sp.
2	IBRC-M 10218	<i>Salinivibrio proteolyticus</i>
3	IBRC-M 10220	<i>Piscibacillus halophilus</i>
4	IBRC-M 10221	<i>Halobacillus karajensis</i>
5	IBRC-M 10403	<i>Alloactinosynnema</i> sp.
6	IBRC-M 10436	<i>Alteribacillus persepolensis</i>
7	IBRC-M 10440	<i>Lentibacillus persicus</i>
8	IBRC-M 10614	<i>Alteribacillus bidgolensis</i>
9	IBRC-M 10743	<i>Thalassobacillus cyri</i>

Amylolytic Microorganisms

No.	Strain number	Name
1	IBRC-M 10095	<i>Bacillus</i> sp.
2	IBRC-M 10163	<i>Micromonospora</i> sp.
3	IBRC-M 10164	<i>Streptomyces</i> sp.
4	IBRC-M 10165	<i>Streptomyces</i> sp.
5	IBRC-M 10168	<i>Streptomyces</i> sp.
6	IBRC-M 10172	<i>Streptomyces</i> sp.
7	IBRC-M 10173	<i>Streptomyces</i> sp.
8	IBRC-M 10218	<i>Salinivibrio proteolyticus</i>
9	IBRC-M 10221	<i>Halobacillus karajensis</i>
10	IBRC-M 10223	<i>Nesterenkonia</i> sp.
11	IBRC-M 10622	<i>Halorubrum</i> sp.

Lipolytic Microorganisms

No.	Strain number	Name
1	IBRC-M 10115	<i>Bacillus persicus</i>
2	IBRC-M 10165	<i>Streptomyces</i> sp.
3	IBRC-M 10168	<i>Streptomyces</i> sp.
4	IBRC-M 10172	<i>Streptomyces</i> sp.

Pectinolytic Microorganisms

No.	Strain number	Name
1	IBRC-M 10163	<i>Micromonospora</i> sp.
2	IBRC-M 10167	<i>Streptomyces</i> sp.
3	IBRC-M 10172	<i>Streptomyces</i> sp.

Pullulanase producing Microorganisms

No.	Strain number	Name
1	IBRC-M 10622	<i>Halorubrum</i> sp.

Amino acid producing Microorganisms

No.	Strain number	Name
1	IBRC-M 10206	<i>Corynebacterium glutamicum</i>

Carotenoid producing Microorganisms

No.	Strain number	Name
1	IBRC-M 10207	<i>Kocuria</i> sp.

bacteriorhodopsin producing Microorganisms

No.	Strain number	Name
1	IBRC-M 10715	<i>Halobacterium salinarum</i>

Microorganisms with anti-aging effects

No.	Strain number	Name
1	IBRC-M 10018	<i>Limimonas halophila</i>

Lactic acid and Probiotic Bacteria

No.	Strain number	Name
1	IBRC-M 10666	<i>Lactobacillus sakei subsp. sakei</i>
2	IBRC-M 10692	<i>Lactococcus lactis subsp. lactis</i>
3	IBRC-M 10711	<i>Lactobacillus casei</i>
4	IBRC-M 10730	<i>Lactobacillus delbrueckii subsp. bulgaricus</i>
5	IBRC-M 10754	<i>Lactobacillus rhamnosus</i>
6	IBRC-M 10755	<i>Lactobacillus reuteri</i>

Seeds list

Family	Genus	Species	Total
Aceraceae	Acer	<i>Acer cappodisicum</i>	1
	Acer	<i>Acer sp.</i>	1
	-	-	1
Alliaceae	Allium	<i>Allium hirtifolium</i>	22
	Allium	<i>Allium paradoxum</i>	2
	Allium	<i>Allium shelkovnikovii</i>	1
	Allium	<i>Allium sp.</i>	71
	-	-	1
Amaranthaceae	-	-	1
	Celosia	<i>Celosia cristata</i>	2
	Gomphrena	<i>Gomphrena globosa</i>	1
	Ixiolirion	<i>Ixiolirion sp.</i>	1
Anacardiaceae	Pistacia	<i>Pistacia atlantica</i>	2
	Pistacia	<i>Pistacia sp.</i>	3
Apiaceae	-	-	1
	Anethum	<i>Anethum graveolens</i>	1
	Astrodaucus	<i>Astrodaucus orientalis</i>	1
	Bupleurum	<i>Bupleurum sp.</i>	2
	Chaerophyllum	<i>Chaerophyllum macropodum</i>	1
	Chaerophyllum	<i>Chaerophyllum sp.</i>	1
	Conium	<i>Conium maculatum</i>	1
	Conium	<i>Conium sp.</i>	1
	Coriandrum	<i>Coriandrum sativum</i>	2
	Cuminum	<i>Cuminum cyminum</i>	1
	Cuminum	<i>Cuminum cyminum</i>	1

	<i>Cuminum</i>	<i>Cuminum spp.</i>	19
	<i>Cuminum</i>	<i>Cuminum sp.</i>	1
	<i>Daucus</i>	<i>Daucus sp.</i>	1
	<i>Daucus</i>	<i>Daucus carota</i>	1
	<i>Diplotaenia</i>	<i>Diplotaenia cachrydifolia</i>	1
	<i>Dorema</i>	<i>Dorema aucheri</i>	1
	<i>Ducrosia</i>	<i>Ducrosia sp.</i>	3
	<i>Echinophora</i>	<i>Echinophora orientalis</i>	1
	<i>Echinophora</i>	<i>Echinophora platyloba</i>	3
	<i>Echinophora</i>	<i>Echinophora sibthorpiana</i>	1
Apiaceae	<i>Echinophora</i>	<i>Echinophora sp.</i>	2
	<i>Eriocycla</i>	<i>Eriocycla oliveriana</i>	1
	<i>Ferula</i>	<i>Ferula gomosa</i>	1
	<i>Ferula</i>	<i>Ferula persica</i>	2
	<i>Ferula</i>	<i>Ferula angulata</i>	1
	<i>Ferula</i>	<i>Ferula assafoetida</i>	16
	<i>Ferula</i>	<i>Ferula sp.</i>	24
	<i>Ferula</i>	<i>Ferula spp.</i>	5
	<i>Ferulago</i>	<i>Ferulago angulata</i>	1
	<i>Ferulago</i>	<i>Ferulago contracta</i>	1
	<i>Foeniculum</i>	<i>Foeniculum vulgare</i>	2
	<i>Foeniculum</i>	<i>Foeniculum vulgare</i>	2
	<i>Grammosciadium</i>	<i>Grammosciadium platycarpum</i>	1
	<i>Grammosciadium</i>	<i>Grammosciadium sp.</i>	1
	<i>Heptaptera</i>	<i>Heptaptera anisoptera</i>	1
	<i>Heracleum</i>	<i>Heracleum sp.</i>	1
	<i>Heracleum</i>	<i>Heracleum persicum</i>	1
	<i>Hippomarathrum</i>	<i>Hippomarathrum sp.</i>	1
	<i>Lomatopodium</i>	<i>Lomatopodium staurophyllum</i>	1

	<i>Malabaila</i>	<i>Malabaila secacula</i>	1
	<i>Malabaila</i>	<i>Malabaila sp.</i>	2
	<i>Petroselinum</i>	<i>Petroselinum crispum</i>	2
	<i>Pimpinella</i>	<i>Pimpinella anisum</i>	1
	<i>Prangos</i>	<i>Prangos vloptera</i>	1
	<i>Prangos</i>	<i>Prangos uloptera</i>	1
	<i>Pycnocycla</i>	<i>Pycnocycla sp.</i>	1
	<i>Pycnocycla</i>	<i>Pycnocycla spinosa</i>	2
	<i>Scandix</i>	<i>Scandix sp.</i>	2
	<i>Trachyspermum</i>	<i>Trachyspermum capticum</i>	1
	<i>Zosimia</i>	<i>Zosimia sp.</i>	3
Apiaceae	-	-	12

Molecular biology kits

IBRC suggests you trying IBRC's DNA extraction kits and its ultra pure Taq DNA polymerase. You enable to isolate the various types of DNA such as genomic DNA, plasmid and PCR products from various types of biological material such as blood, plant, gram-negative or gram-positive bacteria, cultured cells and animal tissues with IBRC's silica column-based DNA extraction kits. Due to using of the qualified silica column and raw material and the effective formulation of the buffers, you can experience the best quality of extracted DNA with sufficient amount of it; while, you have saved your time and money. The extraction procedure with the IBRC's DNA extraction kits is very easy and delightful. Besides, we proud to produce the ultra pure Taq DNA polymerase which can be passed very sensitive tests in purity and yield. Our non-genomic DNA contaminant Taq DNA polymerase is suitable for every PCR amplification or identification experiments even for all types of bacteria.

Here, you can see the list of our molecular biology grade products:

- Plant genomic DNA extraction kit (Cat. no.: MBK0011)
- Blood and cultured cell genomic DNA extraction kit (Cat. no.: MBK0021)
- Gram positive bacteria genomic DNA extraction kit (Cat. no.: MBK0031)
- Gram negative bacteria genomic DNA extraction kit (Cat. no.: MBK0041)
- Plasmid DNA extraction kit (mini-prep) (Cat. no.: MBK0051)
- Gel extraction and enzymatic reaction purification kit (Cat. no.: MBK0061)
- PCR purification kit (Cat. no.: MBK0071)
- **Taq DNA polymerase enzyme (500 U)(Cat. no.: MBE0100)**

Training Affairs

● 103-105

Department of Education

Because biology will continue into the 21st century as a major frontier of science, students should understand biology, not only for its own sake, but because of the need to take informed positions on some of the practical and ethical implications of humankind's capacity to tinker with the fundamental nature of biology".

The rapid change in science of biology is creating opportunities for education. It is important that this education help students understand the need to obtain information from more than one technique to solve a problem. Consequently, to perform more complicated of this task, we designed more than 100 different short term training courses and nearly 2700 students are educated till now.

Plant bank training courses

- Plant cytogenetics (Mitosis & C-banding)
- Techniques for isolation and analysis of phytochemical compounds (TLC and HPLC)
- Techniques for measuring antioxidant activity in biological systems (Enzymatic and non enzymatic)
- Application of molecular markers in plant tissue culture
- Specialized training of agriculture and plant sciences
- Principles and methods of plant cell, tissue and organ culture
- SDS -PAGE of proteins and PAGE zymography

Molecular bank training courses

- Bioinformatic
- Application of molecular technique, PCR, RT-PCR
- Application of advance molecular technique ,Multiplex PCR, SSCP, RFLP, SSR, AFLP, RAPD
- Application of bioinformatics in basic cloning systems
- Application of bioinformatics in advance cloning systems
- Sequence alignment
- Molecular phylogenetic analysis
- Genetic engineering and gene cloning

Human and animal cells bank training courses	Microorganism bank training courses
<ul style="list-style-type: none"> • Animal and human cell culture (primary cell culture and cell lines) • Detection of Mycoplasma in cell culture by three methods: PCR, DNA staining, Culture isolation • Preparation and quality controls of human and animal cell banks • Authentication of cell lines including interspecies and interspecies cross contamination • Immortalization of human B lymphocytes by EBV • Good laboratory practice, Good cell culture practice and Good cell banking practice • Designing and management of a cell culture laboratory and a cell bank • Principles of clinical cytogenetic • Magnetic cell separation techniques • Methods of gene transfer to human cells • Real-Time PCR techniques • DNA & RNA extraction from different human&animal biological and food samples 	<ul style="list-style-type: none"> • Microbial collections:Methods of long-term preservation of microorganisms • Freeze-Drying/Lyophilization methods for long-term preservation of microorganisms • Cryopreservation methods for long-term preservation of microorganisms • Standard methods for identification of novel microbial taxa • Thin layer chromatography • Methods of molecular identification of microorganisms • Bioinformatics and phylogenetic analysis of bacteria • DNA extraction from environmental samples • MLSA techniques for identification of microorganisms
General short training courses	
<ul style="list-style-type: none"> • Biostatistics • SPSS(Basic) • SPSS(Advance) • Statistical Software: Minitab,SAS,R • Research methodology • EndNote 	<ul style="list-style-type: none"> • Working with animal lab • Writing and publishing a scientific paper • Applied basic technical methods used in medical diagnostic laboratory • Applied advance technical methods used in medical diagnostic laboratory

Research Affairs

● 106-107

Introduction

The office of research in Iranian Biological Research Center (IBRC) performs the executive and consulting activities to develop the research in biological sciences and genetic resources.

The office of research monitors the international and national projects that are defined in the Plants, Microorganisms, Molecular, and Cell banks. Research and development of the banks is supervised by the office as well.

At the moment about 40 researchers working in the IBRC banks helped to activate the office.

Activities of the Office of Research

1-Executive activities

The office of research has been involved in the Scientific and technical department to achieve:

- Preparation and management of research programs and projects in research field with considering demands and priorities and offering them to the scientific and technical deputy
- Planning and taking relevant measures in order to encourage and reinforce research inclination in scientific fields for encouragement and reinforcement of researchers.
- holding conferences and scientific symposiums
- making effort to remove research related issues off faculty member, students and lab.
- Drawing research project contract
- Following up fulfilment of research projects.
- Evaluation of research projects both quantitatively and qualitatively as well as presentation of them unto officials in charge.
- Preparation of regulations and required instructions for research affairs and proposing to related organizations
- Criticism and theory affairs and science production
- Establishment of critic centres, formation of software.
- Movement and science production.
- Representation of the achievements of faculty members and students to the symposiums and organizations and fulfillment of short term research courses, such as internship and research skills short-term research opportunities, workgroups, internships and research skills
- Establishment of science and research databases to facilitate and speed up research
- Preparation of annual and seasonal reports to monitor the achievements

2-Consulting related activities

- Projects, plans and graduate thesis projects are consulted and advised by the office of research.
- All project and plans conducted in this research center as well of thesis carried out are subject to consultation offered by this department.
